

IN THE SPECIFICATION:

The paragraph beginning at page 17, line 18 has been rewritten as follows:

--Figures 5 and 6 show the normal situation when there are user calendars for two different users, let's call them Jack and Jill, respectively. Jack makes a phone call to Jill with his Personal Digital Assistant terminal (PDA) in order to agree to a meeting time. In this example, both terminals are functioning as calendar editor terminals. During connection, they both press a "Share Calendar" button and then each terminal accesses the calendar which is solely and exclusively edited by the other terminal. Each terminal then superimposes the two calendars ~~[[ (Fig. 6) ]]~~ (Fig. 7), using a different format for one of the calendars in order to help distinguish them. For example, Jack's calendar could appear in regular font and Jill's in italics, or the two calendars could appear in different colors when superimposed. From the superimposed calendars it is easy for Jack and Jill to see what calendar events are overlapping and when they have a common opportunity to have a meeting.--.
